OP Praha – pól růstu ČR

Are you a doctor from any of the Prague health care institutes (set up by Prague City Hall Administration or other Prague districts)?

Are you missing in your clinical practice availability of specific GENETIC ANALYSIS?

Are you ambitious to offer such to your patients?

If you answered YES to all of the above questions hence our project is dedicated for YOU.

Next Generation Sequencing method (NGS) enables to perform complex differential diagnostics within one analytical run. We would like to offer our expertise with NGS in validating proposed *Concept of NGS DNA sequencing in improvement of routine diagnostics of genetic diseases* (PoC III. 1. LF). Our aim is to develop open multi-level system which would accelerate routine differential diagnostics of selected pathologies including rare hereditary disease.

Help us select the most appropriate genes of your interest !
